

Stop losing \$\$\$ on bad handoffs and missing job context.

Jobline.ai is the digital expeditor for CNC and precision-machining shops — shift handoffs, work-order tracking, operator certification, and ERP integration in one place.

SMART SHIFT HANDOFF

Operators submit structured handoffs per station & shift. Quantity accounting (good / scrap / rework) is enforced so nothing falls through the cracks.

LIVE WORK-ORDER ROUTING

8-step routing with auto-progression. Cancellations & holds require a reason — full audit trail, no hard deletes.

OPERATOR ACCEPTANCE PROGRAM (OAP)

AS9100 / ISO 9001 / OSHA-aligned cert system. Mentor sign-off, retest tracking, printable backup records.

G-CODE ACADEMY (GCA)

Self-study with 10 question banks and an in-app test player. Verified completion certs your shop can hire on.

AI PLANNING ASSISTANT

Real-time view of capability, workload, and machine availability. Suggests where to move programs and routes proposals to supervisors.

ERP CONNECTOR (OPTIONAL)

Read-through or write-through sync with JobBOSS, SAP S/4HANA, Epicor, and Plex. ITAR orgs default to read-only.

MACHINE MONITORING & G-CODE DNC

Live CNC status via WebSocket bridge plus a VS Code extension for syntax intelligence and program streaming.

TALENT NETWORK

Public operator profiles (privacy-controlled) — recruit verified, certified machinists without recruiters.

REAL-TIME DASHBOARDS

Operator station Kanban, supervisor KPIs, admin oversight. Shift-aware analytics with capacity planning.

SHOP FLOOR DISPLAYS

Cast queues to TVs over QR, IP, or Bluetooth. Tokenized read-only — safe for the production floor.

Built for regulated shops: AS9100 · ISO 9001 · ITAR (US-person declaration gate) · FedRAMP-aligned data isolation · Full RLS multi-tenant security.
